

LIST OF CONTENTS

Chapter	Page
INTRODUCTION.....	1
1.1 Rationale for the study.....	1
1.2 State of the problem.....	1
1.3 Objective.....	2
1.4 Scope of the study.....	2
1.5 Abbreviation.....	3
REVIEW OF RELATED RESEARCH AND LITERATURE.....	5
2.1 Environmental impact from PV manufacture.....	5
2.2 The effect of energy on the environment.....	5
THEORY OF PHOTOVOLTAIC MANUFACTURE.....	8
3.1 The production of Single Crystalline Silicon Photovoltaic cell.....	8
3.2 Environmental impact from Silicon Photovoltaic manufacture.....	10
METHODOLOGY.....	15
4.1 Estimation of the energy require for PV panel.....	15
4.2 Calculation of CO ₂ emission	16
4.3 Calculation CO ₂ emission from PV manufacture	18
4.4 Calculation of CO ₂ emission per kWh from PV manufacture and fossil fuels.....	20
4.4.1 For PV manufacture.....	20
4.4.2 For the other fossil fuels.....	21
4.5 Analysis and interpretation results.....	22
RESULTS.....	23
5.1 CO ₂ emission from PV manufacture.....	23
5.2 Comparison between CO ₂ emission per kWh from PV and fossil fuels.....	23
5.3 The energy and CO ₂ balance of PV manufacture.....	27
5.4 CO ₂ emission from fossil fuels.....	29
CONCLUSION AND RECOMMENDATIONS.....	32
6.1 Conclusion.....	32
6.2 Recommendations.....	32

LIST OF CONTENTS

Chapter	Page
REFERENCES.....	33
APPENDICES.....	36
A: PV technology.....	39
B: The number of Single Crystalline Silicon used in Thailand.....	41
C: Theory of greenhouse effect.....	43
BIOGRAPHY.....	62

LIST OF TABLES

Table	Page
1 The component of each kind of fuels per weight (%).....	6
2 The consumption of fuels of electricity and the CO ₂ emission.....	7
3 Material composition of Solar PV systems.....	14
4 Break-down of the energy requirement for c-Si module production with present technology.....	15
5 CO ₂ emission from PV manufacture.....	23
6 Comparison between CO ₂ emission per kWh from fossil fuel and PV..	25
7 The year when CO ₂ emission per kWh of PV equal to emission from fossil fuels.....	27
8 The internal energy balance of a PV panel.....	28
9 CO ₂ emission from fossil fuels replacing PV installed in Thailand.....	28
10 CO ₂ emission from fossil fuels.....	29
11 CO ₂ emission of electricity generation from fossil fuels.....	37
12 Global Warming Potentials.....	49
13 Greenhouse gases.....	56
14 Thailand's national Greenhouse Gas Inventory in 1990.....	57
15 Global sources, concentrations, and atmospheric reactions of trace gases.....	59
16 Greenhouse gas emission from fuel combustion by fuel type and sector in 1990.....	60
17 CO ₂ emission by sector in BAU case.....	61

LIST OF FIGURES

Figure	Page
1 Silicon Ingot.....	8
2 The process from Silicon ingot to PV module.....	10
3 Comparison of CO ₂ emission /kWh between PV and fossil fuels.....	26
4 CO ₂ emission from fossil fuels from 1989 to 1998.....	29
5 Electricity generation from different of fuels	38
6 Carbon dioxide emission inventory in 1995 from different sources.....	45
7 Carbon dioxide emission equivalent in Thailand in 1990.....	46
