LIST OF CONTENTS

Chapter		Page
I	INTRODUCTION	1
	Background	1
	Statement of the problem	4
	Objectives	5
	Scope of the Study	5
	Benefits of the Study	5
II	LITERATURE REVIEW	6
	Introduction	6
	Solar thermal power plant	7
	Thermal Energy Storage system (TES)	15
	Heat transfer of storage system	34
	Review of related research	53
III	RESEARCH METHODOLOGY	59
	Material properties	59
	Temperature profile charging and discharging set up	61
	Temperature distribution in radius set up	61
	Calculation of thermal distribution performance	62
IV	FINDINGS AND DISCUSSION	65
	Temperature profile charging and discharging	65
	Temperature distribution in Radius	72
	Energy stored	77
	Energy recovered	81
	Energy efficiency	84

V CONCLUSIONS AND RECOMENDATION 87

REFERENCES 90

APPENDIX 99

BIOGRAPHY 118

LIST OF TABLES

Table **Page**

1 Candidate Storage Media for SEGS Plants 29
2 Solid Storage Media for SEGS Plants 31
3 Liquid Storage Media for SEGS Plants 32
4 Latent Heat Storage Media for SEGS Plants 33
5 Properties of sodium chloride 51
6 Properties of Sodium nitrate 52
7 Properties of potassium nitrate 53
8 Properties of three NPCMs and lubricant oil 59

LIST OF FIGURES

Figure **Page**

1 Principle of a solar thermal power plant 8
2 Molten salt power tower system schematic diagram 9
3 Solar two, the prototype power tower with 1926 mirrors..... 10
4 Molten salt storage tanks at Solar Two, California..... 11
5 The six 9 kWe dish/stirling operation on the Plataforma solar de Almeria 12
6 Principle of parabolic trough solar collector 14
7 Mismatch in the energy supply and energy demand..... 18
8 Storage of solar thermal energy 24
9 Schematic of a concentrated solar thermal trough power plant with thermal storage 26
10 A one-dimensional system in rectangular coordinates 35
11 Uniform flow past a heated plate 39
12 Heat flow through a cylinder with convection 40
13 One-dimensional heat flow through a hollow cylinder and electrical analog..... 42
14 One-dimensional heat flow through multiple cylindrical section and electrical analog..... 44
15 Essentials of mixed liquid storage systems 46
16 Fully mixed storage with heat exchangers 49
17 The model of experimental set up..... 60
18 The positions of thermocouple distribution in storage tank 60
19 Heat transfer oil temperature over time for three different NPCM configurations and temperature of HTF and storage medium in charging experiment at Flow rate (a) 0.58 kg/s., (b) 0.87 kg/s, (c) 1.16 kg/s and (d) 1.45 kg/s..... 67

LIST OF FIGURES (CONT.)

Figure **Page**

20 Storage discharging fluid temperatures decreasing at Flow rate (a) 0.58 kg/s , (b) 0.87 kg/s, (c) 1.16 kg/s and (d) 1.45 kg/s. 70

21 The temperature of radial temperature profile of 3, 6 and 9 cm of NaCl, KNO_3 and $NaNO_3$ at flow rate (a) 0.58 kg/s, (b) 0.67 kg/s, (c) 1.16 kg/s and (d) 1.45 kg/s 73

22 Flow rates and radial thermal distribution for thermal energy storage (a) NaCl, (b) KNO_3 and (c) $NaNO_3$. 76

23 Instantaneous (a) and cumulative (b) energy stored during the charging process for NaCl. 79

24 Instantaneous (a) and cumulative (b) energy stored during the charging process for KNO_3.. 80

25 Instantaneous (a) and cumulative (b) energy stored during the charging process for $NaNO_3$..... 81

26 Flow rates of energy recovered in (a) NaCl, (b) KNO_3 and (c) $NaNO_3$.... 83

27 Variation of energy efficiency with bed temperature difference during discharging cycle in (a) NaCl, (b) KNO_3 and (c) $NaNO_3$..... 85

ABBREVIATIONS

HTF	=	Heat Transfer Fluid
TES	=	Thermal Energy Storage
NPCM	=	Non-Phase Change Materials
